This updated second edition of the essential graduate textbook in international trade brings readers to the forefront of knowledge in the field and prepares students to undertake their own research. In Advanced International Trade, Robert Feenstra integrates the most current theoretical approaches with empirical evidence, and these materials are supplemented in each chapter by theoretical and empirical exercises. Krieg im Orient **Jan 27 2020** Der Nahe und Mittlere Osten ist seit Jahrzehnten ein Brennpunkt der Weltpolitik. Iran, Saudi-Arabien, Syrien, Libyen, Afghanistan: Die Länder sind ebenso unterschiedlich wie ihre jeweiligen Problemlagen, aber eines, sagt Ulrich Tilgner, haben die dortigen Krisen gemeinsam: Sie strahlen in den Westen aus. Migration und Terror heißen die Stichworte. Mehr noch: Der Westen trägt durch seine verfehlte Politik eine große Mitschuld an der Entstehung und Verbreitung von Terrororganisationen wie dem «Islamischen Staat» oder den permanenten (Bürger-)Kriegen in der Region. Am schlimmsten jedoch ist, so die These von Ulrich Tilgner, dass das Scheitern der westlichen Politik im Orient nichts anderes bezeichnet als einen Wendepunkt der globalen Entwicklung. Der Rückzug der USA aus der Region bedeutet einen weiteren Abschied von ihrer Rolle als weltweiter Ordnungsmacht – und dass auf Europa neue Probleme und Aufgaben zukommen. Es dürfte wenige Journalisten geben, die ein Gebiet der Welt und seine Veränderungen so fundiert analysieren können wie Ulrich Tilgner, der seit vierzig Jahren die gesamte Region kennt. Sein schonungsloser Bericht ist zugleich eine augenöffnende Analyse einer der gefährlichsten Brandherde der Weltpolitik.

The Art of Prolog, second edition Jan 01 2020 This new edition of The Art of Prolog contains a number of important changes. Most background sections at the end of each chapter have been updated to take account of important research results, the references have been greatly expanded, and more advanced exercises have been added which have been used successfully in teaching the course. Part II, The Prolog Language, has been modified to be compatible with the new Prolog standard, and the chapter on program development has been significantly altered: the predicates defined have been moved to more appropriate chapters, the section on efficiency has been moved to the considerably expanded chapter on cuts and negation, and a new section has been added on stepwise enhancement—a system of constructing Prolog programs developed by Leon Sterling. All but one of the chapters in Part III, Advanced Prolog Programming Techniques, have been substantially changed, with some major rearrangements. A new chapter on interpreters describes a rule language and interpreter for expert systems, which better illustrates how Prolog can be used to construct expert systems. The chapter on program transformation is completely new and the chapter on logic grammars adds new material for recognizing simple languages, showing how grammars apply to more complex science examples.
