Diploma Thesis from the year 2019 in the subject Engineering - Safety Engineering, , course: Occupational Safety, Health and Environmental Management, language: English, abstract: This study assessed the manual handling hazards at the NRZ mechanical workshop in Bulawayo. The objectives of the research were the identification of MH hazards, determine the level of awareness of workers on manual handling issues and assessment of the control measures put in place at the organisation to deal with manual handling issues. The researcher adopted a case study research design while incorporating both qualitative and quantitative approaches. Five workshops were only selected namely Wagon, Fitting, Machine, Foundry and Carriage resulting in a sample of 153 questionnaire respondents which were distributed in a randomly. Key informants who were interviewed was the SHE practitioner, nurse in charge, and workshop foremen. More data was also gathered from relevant secondary data sources as well as from field observations. The Statistical Package for Social Sciences (SPSS) was used to analyse data and specifically using the Chi-Square test to establish correlations. The result indicated that the majority of the respondents are not aware of manual handling as revealed by the 73% of the respondents who indicated that they are not aware of manual handling. A number of manual handling hazards were identified which comprise of awkward postures, repetitive movements and vibration exposure which result in a number of injuries which are known as musculoskeletal disorders which encompass cuts muscle strain, sprains chronic pain and minor injuries, The research also noted that the measures which are put in place by management in dealing with manual handling are not effective as they lack strategic action thereby limiting the success of the measures. It was finally concluded that there is need to consider ergonomic interventions in the day to day operations of the company in order to reduce work related risk factors and injuries which come as a result of manual handling. Recommendations were also forwarded to the nation and company on how to address manual handling issues. She teaches workshops on

"Protective Behaviors for Children," "Boundaries for Youth and Adults," the "Importance of the Development of a Feeling Language in Children and Adults," "How to get rid of Stultifying Roles for Men and Women," "Anger Alternatives," and "Conscience Development in Children." Her programs have been adopted by the governments of Botswana and Swaziland in Africa and she has trained the trainers so that the workshops can be facilitated in her absence. This book, "The Skylark Life Skills manual for Women and Girls," is a combination of all of her workshops and is a valuable tool for teachers, principals, life skills educators, librarians, psychologists, and social workers. The book also informs of not only human rights of men and women, but the rights of boys and girls who want to be educated and live in safety. The workshops are embedded in the manual and the handouts for each workshop can be downloaded from Ms. Peterson's website at www.skylarkpubl.com The cover is created by Nancy L. Good. "The Highway Safety Manual (HSM) is a resource that provides safety knowledge and tools in a useful form to facilitate improved decision making based on safety performance. The focus of the HSM is to provide quantitative information for decision making. The HSM assembles currently available information and methodologies on measuring, estimating and evaluating roadways in terms of crash frequency (number of crashes per year) and crash severity (level of injuries due to crashes). The HSM presents tools and methodologies for consideration of 'safety' across the range of highway activities: planning, programming, project development, construction, operations, and maintenance. The purpose of this is to convey present knowledge regarding highway safety information for use by a broad array of transportation professionals"--p. xxiii, vol. 1. TRB's National Cooperative Highway Research Program (NCHRP) Report 715: Highway Safety Manual Training Materials provides training materials to aid in implementing the American Association of State Highway and Transportation Officials' Highway Safety Manual (HSM). Introduced in the early 70s, it became an instant success, giving sixteen year olds their first taste of motorcycle performance and freedom, and totally overshadowing the other mopeds available at that time. Many riders had their FS1-E for only one year before progressing to larger machines. Today, nostalgia for the youthful exuberance engendered by the 'Fizzie' has resulted in many ex-owners wanting to recreate their pride and joy. Most FS1E's have not endured the test of time well, and very few good original examples exist. There are plenty of restorable machines around and this book guides the do-it-yourself restorer through the minefield of initially finding a machine to restore and the pitfalls of a first restoration. Fundamentals, Evolving Technologies, and Emerging Applications raises the bar for handbooks in this field. It is the largest, most complete compilation of HACCP theories, principles, advances, case studies. This handbook is intended to serve as a baseline of hazard analysis critical control point (HACCP) knowledge for quality auditors. HACCP is more than just failure mode and effect analysis (FMEA) for food: it is a product safety management system that evolved and matured in the commercial food processing industry allowing food processors to take a proactive approach to prevent foodborne diseases. Both the FDA and the USDA have embraced HACCP as the most effective method to ensure farm-to-table food safety in the United States. This handbook also assists the certification candidate preparing for the ASQ Certified HACCP Auditor (CHA) examination. It includes chapters covering the HACCP audit, the HACCP auditor, and quality assurance analytical tools. Because of 9/11, there is universal recognition that aviation security is a deadly serious business. Still, around the world today, the practice of aviation security is rooted in a hodgepodge of governmental rules, industry traditions, and local idiosyncrasies. In fact, nearly seven years after the largest single attack involving the air transport industry, there remains no viable framework in place to lift aviation security practice out of the mishmash that currently exists. It is the ambitious intent of Aviation Security Management to change that. The goals of this set are nothing less than to make flying safer, to make transporting goods by air safer, and to lay the foundation for the professionalization of this most important field. This dynamic set showcases the most current trends, issues, ideas, and practices in aviation security management, especially as the field evolves in the context of globalization and advances in technology. Written by leading academic thinkers, practitioners, and former and current regulators in the field, the three volumes highlight emerging and innovative practices, illustrated with examples from around the world. Volume 1 takes a penetrating look at the overall framework in which aviation security management has taken place in the past and will likely do so in the foreseeable future. It covers the major areas of focus for anyone in the aviation security business, and it provides a basis for educational programs. Volume 2 delves into the emerging issues affecting aviation security managers right now. Volume 3: Perspectives on Aviation Security Management covers the full spectrum of international aviation security-related issues. It will serve as part of the foundation for the next generation of research in the area in both a business and cultural context. Collectively, these volumes represent the state of the art in the field today and constitute an essential resource for anyone practicing, studying, teaching, or researching aviation security management.
