*Rechtsfragen der Verknüpfung von Emissionshandelssystemen* Apr 11 2021 Das umweltökonomische Instrument Emissionshandel erfreut sich weltweit zunehmender Beliebtheit als Maßnahme zum Klimaschutz. Die Einführung eines globalen Emissionshandelssystems erscheint zum gegenwärtigen Zeitpunkt jedoch politisch nicht durchsetzbar. In Anbetracht des Handlungsdrucks in Bezug auf die Minderung von Treibhausgasemissionen und aufgrund von ökonomischen Vorteilen bietet sich die Verknüpfung bereits bestehender supranationaler, nationaler und regionaler Systeme als Alternative an. Die vorliegende Arbeit geht aus rechtlicher Perspektive der Frage nach, ob und wie verschiedene Emissionshandelssysteme miteinander verbunden werden können. Die Arbeit untersucht daher die Rechtsfragen der Verknüpfung von Emissionshandelssystemen. Diese reichen von der Vereinbarkeit einer Verknüpfung mit dem internationalen und dem nationalen Recht über die Abschätzung von Folgen einer Verknüpfung auf die Zielerreichung bis zur Vereinbarung einer Verknüpfung etwa durch internationale Verhandlungen und zu der Durchführung der Verknüpfung selbst. Dabei stellen sich diese Fragen nicht nur in der Theorie, sondern sie werden ausgehend vom Recht der Europäischen Union auch konkret für Verknüpfungen zwischen dem europäischen System und anderen nationalen, regionalen und lokalen Emissionshandelssystemen beantwortet.

**LEED Lab** May 13 2021 Facility performance evaluations inform the long-term life of a building and do not end with design or construction. To this aim, Patricia Andrasik created LEED Lab, in collaboration with the US Green Building Council, an increasingly popular international interdisciplinary collegiate laboratory course, which utilizes campus buildings as demonstration sites to facilitate the green assessment of existing buildings. LEED Lab: A Model for Sustainable Design Education uses the LEED O+M building rating system to measure and achieve performance-driven campus facilities in which the readers work and operate. The book explains in simple terms the theory, tasks, tools and techniques necessary for credit implementation and achievement, and includes case studies and exercises for practical application in each chapter. Readers will learn the conceptual scientific framework used to understand existing operational performance and how to quantify sustainable synergies, create green campus policies with administrators, and understand systems such as energy and water in a research-based application. The entire manual is accompanied by a vast online "Teaching Toolkit" to provide helpful educational resources such as syllabi, lectures, examinations, assignments, Individual Student Progress Presentation (ISSP) templates, web resources, and much more. An excellent guide for undergraduate or graduate students enrolled in LEED Lab or a similar campus building assessment course, as well as construction or architectural professionals and facility managers, this manual navigates the complexities of using a green building diagnostic tool such as LEED O+M towards greater environmental literacy.

**Grand Canyon For Sale** Oct 25 2019 Grand Canyon For Sale is a carefully researched investigation of the precarious future of America's public lands: our national parks, forests, wildlife refuges, monuments, and wildernesses. Taking the Grand Canyon as its key example, and using on-the-ground reporting as well as science research, the book makes plain that accelerating climate change will dislocate wildlife populations and vegetation across hundreds of thousands of square miles of the national landscape. So what's the plan, as the next phase of our political history begins? Consolidating protected areas and prioritizing natural systems over mining, grazing, drilling and logging will be essential. But a growing political movement, well financed and occasionally violent, is fighting to break up these federal lands and return them to state, local, and private control. That scheme would foreclose the future for many wild species, which are part of our irreplaceable natural heritage, and would lead directly to the ruin of our national parks and forests. Grand Canyon For Sale is an excellent overview of the physical, biological, and political challenges facing our national parks and U.S. public lands today.

An extensive knowledge of basic pathophysiology, as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago, new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses, we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome, an expanded discussion of the physiology and operation of mechanical ventilation, obstetrical care in the ICU, neurosurgical emergencies, acute coronary syndromes, cardiac arrhythmias, role of whole body rehabilitation in the ICU, ethical conduct of human research in the ICU, and nursing care of the ICU patient.
