Lifetime spectroscopy is one of the most sensitive diagnostic tools for the identification and analysis of impurities in semiconductors. Since it is based on the recombination process, it provides insight into precisely those defects that are relevant to semiconductor devices such as solar cells. This book introduces a transparent modeling procedure that allows a detailed theoretical evaluation of the spectroscopic potential of the different lifetime spectroscopic techniques. The various theoretical predictions are verified experimentally with the context of a comprehensive study on different metal impurities. The quality and consistency of the spectroscopic results, as explained here, confirms the excellent performance of lifetime spectroscopy. Organizing for competitive advantage and profit How can businesses best tap diverse capabilities to generate new ideas, manufacture products, and properly execute strategy? In this groundbreaking, thoroughly researched book, organizational expert Charles Heckscher argues that, in a global network of creation and production, the dominant organizations will be those that master the still-uncodified skills of collaboration--replacing the giants of the past century who thrived on the mastery of bureaucratic systems. Though there has been much discussion of teamwork and alliances in recent decades, Heckscher argues that we are still a long way from fully understanding how to manage fluid and inconstant collaborations; and that this is an area dominated far more by rhetoric than reality. Using a combination of theory and extensive real-life case studies, Heckscher pushes the boundary of organization design and illustrates how companies are able to create new, effective patterns of interactions, and how they can build a culture and infrastructure necessary to support them. For organizational leaders in search of long-term competitive advantage, The Collaborative Enterprise offers sound research findings and invaluable insights. SGN.
