This book provides up-to-date information on all aspects of autoimmune pancreatitis, a unique form of pancreatitis characterized clinically by frequent presentation with obstructive jaundice and dramatic response to steroids, histologically by a

lymphoplasmacytic infiltrate with fibrosis, and radiologically by pancreatic enlargement. Current concepts regarding the disease and its classification into subtypes 1 and 2 are explained, and clinical, serological, and histopathological findings are carefully described. Imaging features on all the relevant modalities are illustrated, covering both the pancreas and other involved organs. Current and emerging therapeutic strategies, including steroids, immunomodulatory drugs, and rituximab, are then discussed. Studienarbeit aus dem Jahr 2014 im Fachbereich Pflegewissenschaften, Note: 1,3, Frankfurt University of Applied Sciences, ehem. Fachhochschule Frankfurt am Main (Fachbereich 4), Sprache: Deutsch, Abstract: „Mit dem Gebrauch der Bezeichnung „Pflegediagnose“ wurde offenkundig, dass Pflegenden Diagnostiker sind. Um den Fokus der pflegerischen Behandlung festzulegen, war das klinische Urteil vor dieser Zeit in der klinischen Praxis unsichtbar oder wurde nicht benannt. Heute könnte die Unsichtbarkeit der Rolle der Pflegenden in Gesundheitsinstitutionen immer noch existieren, wo Pflegenden keine Pflegediagnosen verwenden oder diese ohne Interesse an Genauigkeit verwenden. Jedoch mit dem Beginn einer formalen Klassifikation der Pflegediagnosen wurde weiterhin akzeptiert, dass Pflegenden Diagnostizierende sind, die diagnostizierendes, logisches Denken in Zusammenarbeit mit dem Patienten anwenden, um die besten Diagnosen zu bestimmen, die zu den Pflegeinterventionen führen, die positive Patientenoutcomes erreichen.“ (Mosebach 2010, 25) In dieser Hausarbeit soll zu Beginn ein Fall dargestellt werden. Zum Einstieg werden die Stammdaten und eine kurze biografische Beschreibung dargestellt. Anschließend wird die pflegerische Situation anhand des „Assessment eines Erwachsenen“ nach Gordon und dem „Geriatrischen Basisassessment“ nach Bach, Hofmann, Nikolaus dargestellt. Dies dient der objektiven Beschreibung des Falls. Im weiteren Verlauf kommt es zu einer Einschätzung der pflegerischen Situation durch Angehörige. Zuletzt wird die Autorin eine pflegfachliche, jedoch subjektive Sichtweise des Falls darlegen. Die medizinisch gestellten Diagnosen werden aufgezeigt, da sich aus diesen im weiteren Verlauf ebenfalls Pflegediagnosen ergeben können, zur ganzheitlichen Betrachtung des Falls müssen auch diese berücksichtigt werden. Die verabreichten Medikamente stellen ebenso eine Bedeutung dar. Die Medikamente sollen zum einen aufgeführt werden, zum anderen sollen Nebenwirkungen, sowie ggf. Wechselwirkungen dargestellt werden, da auch diese zu Pflegediagnosen führen können und somit ggf. verhindert werden können. Außerdem ist es sinnvoll dies zu berücksichtigen, da evtl. auftretende Neben- und/oder Wechselwirkungen, die bereits aufgetreten sind und als solche nicht erkannt wurden, auszuschalten sind um eine Verbesserung für die Patientin zu erreichen. Stroke is one of the leading causes of death in the world, resulting mostly from the sudden ruptures of atherosclerosis carotid plaques. Understanding why and how plaque develops and ruptures requires a multi-disciplinary approach such as radiology, biomedical engineering, medical physics, software engineering, hardware engineering, pathological and histological imaging. Multi-Modality Atherosclerosis Imaging, Diagnosis and Treatment presents a new dimension of understanding Atherosclerosis in 2D and 3D. This book presents work on plaque stress analysis in order to provide a general framework of computational modeling with atherosclerosis plaques. New algorithms based on 3D and 4D Ultrasound are presented to assess the atherosclerotic disease as well as very recent advances in plaque multimodality image fusion analysis. The goal of Multi-Modality Atherosclerosis Imaging, Diagnosis and Treatment is to fuse information obtained from different 3D medical image modalities, such as 3D US, CT and MRI, providing the medical doctor with some sort of augmented reality information about the atherosclerotic plaque in order to improve the accuracy of the diagnosis. Analysis of the plaque dynamics along the cardiac cycle is also a valuable indicator for plaque instability assessment and therefore for risk stratification. 4D Ultrasound, a sequence of 3D reconstructions of the region of interest along the time, can be used for this dynamic analysis. Multimodality Image Fusion is a very appealing approach because it puts together the best characteristics of each modality, such as, the high temporal resolution of US and the high spatial resolutions of MRI and CT. Over the past 20 years, diagnostic tests for pediatric pulmonologists have revolutionized care of children afflicted with respiratory disorders. These tests have been used to not only help in diagnosis, but also in the management and treatment of these children. Bronchoscopic, imaging and physiologic advances have improved clinical care of these children and have been used as outcome measures in research trials. Diagnostic Tests in Pediatric Pulmonology: Applications and Interpretation describes the various diagnostic modalities (especially the newer ones) that are available for the evaluation of pediatric respiratory disorders. It also provides an understanding of the advantages and limitations of each test so that the clinician may choose the most appropriate ones. An internationally renowned group of authors describe how best to interpret the key findings in a variety of tests as well as the possible pitfalls in incorrect interpretation. This volume focuses on the main diagnostic modalities used in the evaluation of pediatric patients with respiratory disorders and presents up-to-date information on the advantages and limitations of each test for a variety of conditions encountered in the

practice of pediatric pulmonology. Clinical utility of these tests is also highlighted. This valuable resource is well suited to practicing clinicians, including pediatric pulmonologists, pediatricians and primary care practitioners, as well as trainees, respiratory therapists and clinical researchers. Sleep disorders and movement disorders are inter-connected areas of neurology, and this comprehensive text examines the relationship, the basic science and the latest advances in treatment. This book provides a comprehensive, state-of-the-art overview of pancreatic cancer. Bachelorarbeit aus dem Jahr 2012 im Fachbereich BWL - Personal und Organisation, Note: 1,0, Leibniz Akademie Hannover - Verwaltungs- und Wirtschaftsakademie Hannover, Sprache: Deutsch, Abstract: Die emotional-körperliche und geistige Überleistung in der modernen „postindustriellen Informationsgesellschaft, geprägt von Globalisierung, Wertewandel und Verlust individueller Sicherheiten, kann den arbeitsstärksten und erfolgreichsten Menschen zu Boden reißen.13 Diesem Phänomen entgegenzuwirken ist Sinn und Ziel dieser Arbeit. Nachdem die Relevanz und Aktualität des Themas Burnout herauskristallisiert werden, liegt der Fokus zunächst auf den wissenswerten Grundlagen wie dem geschichtlichen Hintergrund, der Begriffsentwicklung und den Definitionsvorschlägen. Anschließend sind die Symptome einer Depression sowie die Burnout- Entwicklung anhand der 12 Stadien von Burnout nach Freudberger und North veranschaulicht. Um einen Überblick über mögliche Ursachenbereiche für die Entstehung von Burnout zu geben, werden begünstigende Persönlichkeitsfaktoren, der gesellschaftliche Einfluss und der vermehrt auftretende Stress in Unternehmen thematisiert. Problemfelder der Ursachenidentifizierung werden ebenfalls herausgestellt. Von der Personalbedarfsplanung und -deckung während der Arbeitsunfähigkeit des Burnout-Betroffenen bis zur Wiedereingliederung in den Beruf werden neben diesen reaktiven auch die präventiven Maßnahmen wie beispielsweise die Sensibilisierung der Führungskräfte für Burnout-Symptome, die Realisierung von Entspannungsmöglichkeiten und die Vorteile regelmäßiger Mitarbeitergespräche umfassend dargelegt. Einen zentralen Themenbereich bildet die umfangreiche Befragung, in der alle relevanten Inhalte dieser Arbeit detailliert zur Überprüfung eingebunden sind. Nach der Darstellung der gewählten Befragungsmethode und der Informationen zum Aufbau des Fragebogens wird die Durchführung der Untersuchung ausführlich beschrieben. Es folgt die Auswertung der gewonnenen Antworten mit veranschaulichenden Grafiken zum besseren Verständnis. Auf Grundlage der Ergebnisse der Befragung werden als Empfehlung für Unternehmen zum Umgang mit Burnout abschließend die Nutzenpotenziale des Personalaufbaus statt -abbaus sowie die Evaluierung der Interdependenz von Burnout und Mobbing zur Unterstützung der Präventionsmaßnahmen aufgegriffen. A nursing diagnosis is defined as a clinical judgement about individual, family or community responses to actual or potential health problems or life processes which provide the basis for selection of nursing

interventions to achieve outcomes for which the nurse is accountable. Accurate and valid nursing diagnoses guide the selection of interventions that are likely to produce the desired treatment effects and determine nurse-sensitive outcomes. Nursing diagnoses are seen as key to the future of evidence-based, professionally-led nursing care - and to more effectively meeting the need of patients and ensuring patient safety. In an era of increasing electronic patient health records standardized nursing terminologies such as NANDA, NIC and NOC provide a means of collecting nursing data that are systematically analyzed within and across healthcare organizations and provide essential data for cost/benefit analysis and clinical audit. 'Nursing Diagnoses: Definitions and Classification' is the definitive guide to nursing diagnoses worldwide. Each nursing diagnoses undergoes a rigorous assessment process by NANDA-I with stringent criteria to indicate the strength of the underlying level of evidence. Each diagnosis comprises a label or name for the diagnosis and a definition. Actual diagnoses include defining characteristics and related factors. Risk diagnoses include risk factors. Many diagnoses are further qualified by terms such as effective, ineffective, impaired, imbalanced, readiness for, disturbed, decreased etc. The 2009-2011 edition is arranged by concept according to Taxonomy II domains (i.e. Health promotion, Nutrition, Elimination and Exchange, Activity/Rest, Perception/Cognition, Self-Perception, Role Relationships, Sexuality, Coping/ Stress Tolerance, Life Principles, Safety/Protection, Comfort, Growth/Development). The book contains new chapters on 'Critical judgement and assessment' and 'How to identify appropriate diagnoses' and core references for all nursing diagnoses. A companion website hosts NANDA-I position statements, new PowerPoint slides, and FAQs for students. 2009-2011 edition arranged by concepts New chapters on 'Critical judgement and assessment' and 'How to identify appropriate diagnoses' Core references for new diagnoses and level of evidence for each diagnosis Companion website available This book aims to expand the awareness and understanding of the emotional sequelae of prenatal/preimplantation diagnosis, prenatal decision-making, pregnancy interruption for fetal anomaly, multifetal reduction for high-order multifetal pregnancies and preimplantation choices involving the selection of embryos. Fachhochschule Frankfurt am Main (Fachbereich Gesundheit und Soziales), Veranstaltung: Studiengang Pflege (B.Sc.), Sprache: Deutsch, Abstract: Bei der hier vorliegenden Bachelorthesis handelt es sich um ein Kommunikations-Paradigma. Üblicherweise wird der Kommunikationsbegriff zwischen Menschen mit der medizinischen Diagnose Wachkoma und Pflegenden durch Schlagworte wie Basale Stimulation assoziiert. Diese Stimmulationsprogramme berücksichtigen allerdings nicht die Emotion als verhaltensregulierendes Element und stellen keine Hypothesen zu Bedürfnissen und Motiven des Betroffenen auf. Ferner lassen sie keine Rückschlüsse zum inneren Verhalten aufgrund äußerer Verhaltensweisen zu. Der hier vorgestellte Ansatz berücksichtigt u.a. Resonanzprozesse, Bindungstheorie, funktionelle Verhaltensarchitektur und den psychoanalytischen Gedanken um eine emotionale Abwehrhaltung zu vermeiden. Ferner geht er den Befindlichkeitsappäsentationen mit Hilfe der Spiegelneurone auf den Grund. Er favorisiert den gemeinsamen Gegenstand und kooperative Beziehungen mit gemeinsamen Handlungen und aktiver Beteiligung des Betroffenen. Stetig wiederkehrende, strukturell gleichbleibende und biographisch vertraute Alltagshandlungen und gleichbleibende Bezugspersonen sollen genutzt werden, um die Emotionen des Betroffenen zu beeinflussen und diesen zu einer merklichen Verhaltensänderung seinerseits zu bewegen. Der Betroffene erlangt so Selbstvertrauen und die Bereitschaft sich beeinflussen zu lassen. Die Pflegeperson erlangt im Gegenzug eine feinfühlig Wahrnehmung und Sicherheit in der Beeinflussung des Betroffenen. Damit die Emotionen des Betroffenen beeinflusst werden können, muss die eigene emotionale Abwehrhaltung reduziert werden, ansonsten kommt es zur inkongruenten Kommunikation und isolierenden Bedingungen oder zum Verdinglichungsprozess. Dieser wird häufig durch den defektorientierten Ansatz gestützt. Wird statt groben und technischen Verhaltens sozialemotionale Kommunikation genutzt, führt dies zur Affekt-synchronie und somit zur Resonanz. Diese Resonanzprozesse sorgen für gelingende Dialoge, das Mittel der Wahl für eine rehabilitative und inklusive Pflege ... Die gängigen Begriffe zum Wachkoma werden kritisch diskutiert. Es wird die Frage beantwortet, ob der Betroffene mitbekommt oder nicht. Die Bewusstseinsfrage wird hier ausgiebig anhand einer Pro- und Contra- Diskussion erläutert. Unsicherheitszonen, Mystifizierung und das "so tun als ob" werden beschrieben und aufgehoben. Zum Schluss erfolgen Praxisempfehlungen und Empfehlungen zur Weiterentwicklung der existierenden Weiterbildungen zum Wachkoma. With constant improvements to MR image quality, it's important to have a resource reflecting the most recent developments. Heather Herdman and Shigemi Kamitsuru. The 11th edition is the definitive guide on nursing diagnoses, as reviewed and approved by NANDA International (NANDA-I), the leading professional organization that develops, researches, disseminates, and refines nursing taxonomy. This book is designed to give current users of the full text a "quick glance" into what is new in the latest edition and more in-depth information on key changes, including new diagnoses. Four chapters provide insightful commentary on changes, new categories, revisions, and taxonomy deletions; core issues that impact diagnoses; three types of clinical reasoning models: problem-focused, risk nursing diagnosis, and health promotion diagnosis; and 17 new nursing diagnoses. Key Features Explanation of standardized terminology changes used in nursing diagnostic indicators, including defining characteristics, related factors, and risk factors The addition of visual flow charts enhances understanding of the essential steps required to make accurate diagnoses Discussion of conceptual issues the authors anticipate will require additional clarification in the upcoming 12th edition, including recommendations for modification The must-have supplement enhances understanding, supports education, and facilitates implementation of important diagnostic changes in daily practice. All practitioners, including nursing students, professional nurses, nurse educators, nurse informaticists, and nurse administrators, who utilize the primary text will benefit from reading this companion piece. This book provides a comprehensive overview of the use of PET and SPECT in not only classic neurodegenerative disorders but also cerebrovascular disorders, brain tumors, epilepsy, head trauma, coma, sleeping disorders, and inflammatory and infectious diseases of the CNS. The new edition has been revised and updated to reflect recent advances and includes additional chapters, for example on the use of artificial intelligence and machine learning in imaging data analysis, the study of brain connectivity using PET and SPECT images, and the role of PET imaging in modulation of brain functioning by deep brain stimulation. The authors are renowned experts whose dedication to the investigation of neurological disorders through nuclear medicine technology has achieved international recognition. Most chapters are written jointly by a clinical neurologist and a nuclear medicine specialist to ensure a multidisciplinary approach. This state of the art compendium will be invaluable for neurologists and radiologists/nuclear medicine specialists and will also be informative for interested general practitioners and geriatricians. Companion volumes on PET and SPECT in psychiatry and in neurobiological systems complete a trilogy. Stroke is thought to be the second biggest killer worldwide, and is responsible for over 5 million deaths per year. Several strategies have been developed to enhance treatment of stroke patients. Multimodal neuroimaging allows physicians to diagnose and evaluate not only the ischemic core but also the vessel pattern and collateral status. Stroke Treatment involves extensive intravenous drug administration. Several

new drugs with long lasting efficacy are now being tested in randomized clinical trials. In this context, endovascular treatment is a promising avenue that allows physicians to treat patients in extended time windows especially patients in whom intravenous RTPA has failed. A new era has emerged with new devices called stent retrievers and aspiration techniques, which have demonstrated higher rates of recanalization and clear superiority over previous devices employed in RCTs. The third volume of Frontiers in Neurosurgery presents updated information on ischemic stroke treatment. The volume comprehensively covers the epidemiology, physiology, diagnosis and treatment modalities of stroke. Readers will also find key information on diagnosing and treating rare and lesser known causes of stroke as well as notes about new devices and medical procedures to combat ischemic stroke. This volume is a useful resource for neurosurgery specialists as well as nurses, physiotherapists and caregivers. A pocket-sized clinical companion, Manual of Psychiatric Nursing Care Planning, 4th Edition helps you assess psychiatric nursing clients, formulate nursing diagnoses, and design psychiatric nursing care plans. It offers quick and easy access to information on care in a range of settings including the inpatient unit, home care, or community mental health setting. Expert author Elizabeth M. Varcacolis, RN, MA, provides a clinically based focus with the latest guidelines to psychiatric nursing care. Designed to accompany Foundations of Mental Health Nursing, this book is a perfect reference for creating care plans and for clinical use. Current coverage includes the latest diagnoses, assessment and treatment strategies, and psychotropic drug information relevant to nursing care of patients with psychiatric disorders. Clinically based information helps you provide patient care in a range of environments including the inpatient unit, community mental health setting, or home care setting. Coverage of all major disorders includes those commonly encountered in a clinical setting. A consistent format for each care plan includes a nursing diagnosis, etiology, assessment findings/diagnostic cues, outcome criteria, long-term goals, short-term goals, and interventions and rationales. Assessment tools such as tables, charts, and questionnaires are provided in an appendix for quick reference. A Major Psychotropic Interventions and Client and Family Teaching chapter describes the uses and workings of psychotropic agents. The latest diagnostic information includes the DSM-IV-TR taxonomy with diagnostic criteria for mental disorders, to enable accurate assessment and diagnosis of patients. Current psychiatric nursing guidelines are based on ANA's 2007 Psychiatric Mental-Health Nursing: Scope and Standards of Practice. Updated 2009-2011 NANDA-I nursing diagnoses assist with accurate diagnoses by including the latest nursing diagnoses related to psychiatric nursing. Updated drug information includes the latest on medications used with psychiatric patients, for optimal drug therapy. Disorders section covers commonly encountered medical-surgical conditions in a consistent, clinically relevant presentation that includes: Definition/Description Pathophysiology Clinical Manifestations Complications Diagnostic Studies Collaborative Care (including Drug Therapy, where relevant) Nursing Management Goals Nursing Diagnoses (using the most current NANDA terminology) Nursing Interventions Patient and Caregiver Teaching Treatments and Procedures section provides need-to-know information on common medical-surgical treatments and procedures. Reference Appendix features key reference information commonly used in nursing practice, including laboratory values, commonly used formulas, and Spanish translations of key phrases. Patient teaching content is highlighted with a special icon, identifying information that patients and caregivers need to know about the care of various conditions. Cross-references to Lewis: Medical-Surgical Nursing, 8th Edition make it easy to locate more in-depth information. This book is about algebraic and differential methods, as well as fractional calculus, applied to diagnose and reject faults in nonlinear systems, which are of integer or fractional order. This represents an extension of a very important and widely studied problem in control theory, namely fault diagnosis and rejection (using differential algebraic approaches), to systems presenting fractional dynamics, i.e. systems whose dynamics are represented by derivatives and integrals of non-integer order. The authors offer a thorough overview devoted to fault diagnosis and fault-tolerant control applied to fractional-order and integer-order dynamical systems, and they introduce new methodologies for control and observation described by fractional and integer models, together with successful simulations and real-time applications. The basic concepts and tools of mathematics required to understand the methodologies proposed are all clearly introduced and explained. Consequently, the book is useful as supplementary reading in courses of applied mathematics and nonlinear control theory. This book is meant for engineers, mathematicians,

physicists and, in general, to researchers and postgraduate students in diverse areas who have a minimum knowledge of calculus. It also contains advanced topics for researchers and professionals interested in the area of states and faults estimation. The Cengage Learning DISCOVERY SERIES: HUMAN SEXUALITY is designed to deliver traditional course content in an innovative hybrid learning format instruction presented in a printed handbook paired with integrated online applications and assessments. The program promotes measurable mastery of core course learning objectives by guiding students' active engagement with content delivered through the book, images, video, simulations, and assessments. This contemporary approach to learning seamlessly integrates text and technology, enabling students to easily move from the book's instruction to its online applications for a deeper, lasting understanding of the core psychological concepts, and for assessments (all assignable) that reliably track students' progress and performance.
