How was it possible for opponents of slavery to be so vocal in opposing the practice, when they were so accepting of the economic exploitation of workers in western factories – many of which were owned by prominent abolitionists? David Brion Davis's *The Problem of Slavery in the Age of Revolution, 1770-1823*, uses the critical thinking skill of analysis to break down the various arguments that were used to condemn one set of controversial practices, and examine those that were used to defend another. His study allows us to see clear differences in reasoning and to test the assumptions made by each argument in turn. The result is an eye-opening explanation that makes it clear exactly how contemporaries resolved this apparent dichotomy – one that allows us to judge whether the opponents of slavery were clear-eyed idealists, or simply deployers of arguments that pandered to their own base economic interests. "Claudia Weltz explores responses to the problem of evil that do not end up in a theodicy. Kierkegaard's and Rosenzweig's reasons for having no reason to

defend God and their ethics of love are discussed in the context of German idealism and French phenomenology."--BOOK JACKET. The massive depression of the 1930's detonated the crisis between harsh reality and the vision of material abundance and economic security created by the American industrial order. Amid widespread poverty there was increasing concentration of economic power and loss of individual initiative. Professor Hawley traces the pattern of this conflict. He analyzes the National Recovery Administration, the sources and nature of the antitrust ideology, the rise of Keynesianism, the confusion within the Roosevelt Administration during the recession of 1937-38, and the government career of Thurman Arnold. Attention is given to the administrators of the New Deal and to the beliefs, pressures, and symbols that affected their policy decisions. How and why these ideas and pressures produced policies that were economically inconsistent yet politically workable is also explained. Originally published in 1966. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. The Problem of Evil offers a comprehensive examination of the problem of evil from both technical and ministerial perspectives. Author and acclaimed philosophy professor Jeremy A. Evans treats the history of the problem with fairness, looking at it through contemporary philosophical literature and offering responses to the most substantive arguments from evil. His purpose is to provide holistic responses to the problem of evil that are philosophically and theologically maintainable. Among the chapters are "Introduction to the Problem of Evil," "The Logical Problem of Evil," "The Evidential Problem of Evil," "The Problem of Hell," "The Problem of Divine Hiddenness," "The Defeat of Evil," "Moral Evil: Comparing Theism and Naturalism," and "Evil and the Worship Worthiness of God." This book provides the first English language account of the interview method known as the PCI. Offering a way of collecting knowledge by means of involving people actively in the research process, the interviewer takes the role of a well-informed traveller. With careful preparation and planning, the interviewer sets out with priorities and expectations, but the story the interviewer tells about his journey depends on the people encountered along the road. Novice and experienced interview researchers across the social, educational and health sciences will find this an invaluable guide to conducting interviews. Andreas Witzel is senior researcher (retired) at the University of Bremen and former director of the Bremen Archive for Life Course Research. Herwig Reiter is senior researcher in the Department of Social Monitoring and Methodology of the German Youth Institute in Munich. This publication contains the proceedings of a seminar 'The problems of dark-cutting in beef' held by the Commission of the European Communities (CEC) at the Commission in Brussels on 7 and 8 October 1980. As part of the CEC programme of coordination of agricultural research, this meeting was organised in the framework of the beef and animal welfare activities by Dr. D.E. Hood and Dr. P.V. Tarrant, Meat Research Department, An Faras Taluntais. Dunsinea, Castleknock, Dublin, Ireland. The proceedings, edited by the organisers assisted by Janssen Services, 33a, High Street, Chislehurst, Kent, UK, provide an authoritative text-book on this important aspect of meat technology. Reduction of pre-slaughter stress and improvement in carcass and meat quality is becoming increasingly important in the international meat trade. This results in particular from growing consumer concern about the welfare of meat animals during the pre-slaughter period and from specific meat packaging and marketing requirements. Technical development of the beef processing industry is dependent on a uniformly high level of meat quality in the raw material. Selected by CHOICE as an Outstanding Academic Book for 1995, This book comprises a series of studies devoted to an analytic examination of reasoning in the field of conduct. The first is analysis of the idea of justice undertaken in a spirit of positivism; the series continues in a different vein necessitated by compelling obligation the author found himself under to work out a logic of value judgments. This logic is in fact the Rhetoric and Topics of antiquity: the author's "Traité de l' Argumentation (Paris, 1958) gave this new life, and the present work demonstrates its philosophical importance. Rescue the Problem Project provides project managers, executives, and customers with ways to accurately assess issues and fix problems. Many books explain how to run a project, but only this one shows how to bring it back from the brink of disaster. Susan Dwyer's The Problem of Pornography is the first anthology to present a balanced view of the scope of arguments concerning the nature of pornography and censorship. Devoted exclusively to the topic, Dwyer's book presents a range of feminist and other responses to pornography from influential women and men, including Andrea Dworkin, Catharine MacKinnon, Helen Longino, Ronald Dworkin, Stanley Fish, and John Stoltenberg. By not promoting any single view, The Problem of Pornography encourages comparison and debate. This excellent collection stresses the complexity of debate surrounding free speech issues, and includes chapters that address the limits of both censorship and First Amendment absolutism. Dwyer's book contains: a section on gay pornography ; a legal appendix describing central Supreme Court cases in both the United States and Canada ; important legal milestones, including the Minneapolis Anti-Pornography Ordinance. Der diesjährigen Tagung des Salzburger Geomechanik-Kreises haben wir den Namen Ludwig-Föppl-Kolloquium gegeben; wir wollten damit diesen Pionier der Geomechanik und Mitbegründer unserer Kolloquien aus Anlaß seines 80. Geburtstages, den er am 27. Februar 1967 beging, in besonderer Weise ehren. Zu einer Zeit, da noch keineswegs abzusehen war, ob dem Gedanken einer in Gemeinschaft erarbeiteten Synthese zwischen Geologie, Geophysik, Ingenieur- und Bergbauwissenschaften Erfolg oder Mißerfolg beschieden sein würde, hat sich Ludwig F ö P P I mit dem Gewicht seines Namens und mit der ihm eigenen Aktivität zu unseren Geomechanik-Bestrebungen bekannt, und es ist unser Stolz, daß dieser Forscher bei seiner Jubiläumsvorlesung an der Technischen Hochschule in München die Geomechanik selbst ein Hauptarbeitsgebiet seiner reifen Jahre genannt hat. Allein die unserem Kreise gewidmeten Beiträge sind für die Entwicklung unserer jungen Wissenschaft grundlegend gewesen und haben richtungweisende Impulse gegeben, aus denen vieles weitere erwachsen konnte. Viele Teilnehmer dieses Kollo quiums erinnern sich noch gerne der Vorträge über spannungsoptische Versuche an geschichtetem Material (1955), den Übergang von der Haftreibung zur Gleitreibung (1955), elastische Spannungszustände in Körpern mit ebenen Schnitten (Klüften) (1957), die Formänderungsarbeit als Kriterium für die Standsicherheit von Stol len (1957) und über Störungen des Spannungszustandes in der Umgebung eines Druckstollens durch Spalten (1957); über den Bodendruck unter einem belasteten Fundamentbalken (1958); die Sprengwirkung des Porenwassers beim Druckversuch (1958) und die Untersuchung der Standfestigkeit von Stollen nach der Methode der kleinen Schwingungen (1958); zusammen mit Sonntag über Spannungen im Gebirge mit plattenförmigem Aufbau (1957), über angeheftete Stützmauern mit The "Natural Problem of Consciousness" is the problem of understanding why there are presently conscious beings at all. Given a non-reductive naturalist framework taking consciousness as an ontologically subjective biological phenomenon, how can we rationally explain the fact that the actual world has turned out to be one where there are presently living beings that can feel, rather than having developed as a zombie-world in which there would be no conscious experiences of any kind? This book introduces the Natural Problem by relating it to central problems in the philosophy of mind (metaphysical mind-body problem, Hard Problem of consciousness) and emphasizing the distinctive interest of its diachronic dimension. Ranging from philosophy to biology and neuroscience, it offers a thorough analysis aimed at better understanding what could explain why phenomenal consciousness has been preserved throughout evolution by natural selection. This is an original, engaging, and thought provoking philosophical study of a neglected but fundamental question regarding the nature and origin of consciousness. Discussion of the concept of evil in Indian philosophy. Chiefly on works and philosophy of Sir Muhammad Iqbal, 1877-1938, Urdu and Persian poet; study. Febvre asked this core question in The Problem of Unbelief: "Could sixteenth-century people hold religious views that were not those of official, Church-sanctioned Christianity, or could they simply not believe at all?" The answer informed a wider debate on modern history, particularly modern French history. Did the religious attitudes of the Enlightenment and the twentieth century—notably secularism and atheism—first take root in the sixteenth century? Could the spirit of scientific and rational inquiry of the twentieth century have begun with the rejection of God and Christianity by men such as Rabelais, writing in his allegorical novel Gargantua and Pantagruel - the work most often cited as a proto-"atheist" text prior to Febvre's study? The debate hinged on some key differences of interpretation. Was Rabelais mocking the structures of the Christian Church (in which case he might be anticlerical)? Was he mocking the Bible scriptures or Church doctrines (in which case he might be anti-Christian)? Or was he mocking the very idea of God's existence (in which case he might be an atheist)? The other great contribution that Febvre made to the study of history can be found not so much in the fine detail of this work as in the additions that he made to the historian's toolkit. In this sense, Febvre was highly creative; indeed it can be argued that he ranks among the most creative of all historians. He sought to move the study of history itself beyond its traditional focus on documentary records, arguing instead that close

analysis of language could open up a gateway into the ways in which people actually thought, and to their subconscious minds. This concept, the focus on "mentalities," is core to the hugely influential approach of the Annales group of historians, and it enabled a switch in the focus of much historical inquiry, away from the study of elites and their deeds and towards new forms of broader social history. Febvre also used techniques and models drawn from anthropology and sociology to create new ways of framing and answering questions, further extending the range of problems that could be addressed by historians. Working together with colleagues such as Marc Bloch, his understanding of what constituted evidence and of the meanings that could be attributed to it, radically redefined what history is - and what it should aspire to be. In this book, the author of "Language, Truth and Logic" tackles one of the central issues of philosophy - how we can know anything - by setting out all the sceptic's arguments and trying to counter them one by one
