This manual strives to provide a clearer path for judges and clerks of court handling a chapter 9 case. It outlines the statutory requirements and processes that apply in any Chapter 9 case and provides examples of relevant cases and resources. It is organized into several parts including: Part II summarizes the history of Chapter 9 and discusses constitutional challenges to the original municipal bankruptcy laws enacted in 1934 and the structural and constitutional issues analyzed by lower courts in the context of Chapter 9. Part II presents an overview of the Chapter 9 process, contrasting it with the Chapter 11 process and providing several primers on issues unique to a Chapter 9 case. This section also includes basic information on matters, such as municipal accounting, the municipal bond market, and public pension obligations. Part IV identifies key administrative matters for the judge and the clerk of court in a Chapter 9 case. Part V explains what transpires after the filing of a Chapter 9 petition and appointment of the bankruptcy judge. It follows not only the legal steps required at the beginning of the case and eligibility determination, but also covers questions, issues, and information the judge may want to consider as the case starts down the Chapter 9 path. Part VI discusses the administration of the case -- i.e. what happens after the order for relief but before the plan confirmation process. Part VII covers the end of a case: it examines the plan, the disclosure statement, and the confirmation process. It includes information on postconfirmation jurisdiction and implementation issues.

You will also find information about modification of the plan or if the debtor is unable to confirm a plan within a reasonable time, or dismissal of a case. Part VII is devoted to smaller municipal cases and cases involving special purpose entities or instrumentalities of a state. Part IX focuses on larger municipal cases. These cases can present factors and considerations unique to the size of, and stakeholders, in these cases. Part X summarizes key takeaway points for judges and clerks of the court handling Chapter 9 cases. This publication supersedes the 2008 edition (ISBN 9780115529252) The Nine Chapters on the Mathematical Art is a classic text: the most important mathematical source in China during the past 2000 years, and comparable in significance to Euclid's Elements in the West. This volume contains the first complete English translation of the Nine Chapters, together with two commentaries written in the 3rd and 7th centuries AD, and a further commentary by the translators. The Nine Chapters contains 246 problems and their solutions, which fall into nine categories that are firmly based on practical needs. There are methods for solving problems in areas such as land measurement, construction, agriculture, commerce, and taxation. The Chinese commentators provided the algorithms needed to solve the problems, and explanations of how the algorithms work. The translators' commentary provides clear and accessible background material for the Western reader, explanations of technicalities, and notes on the treatment of similar or identical mathematical problems in other countries. The Nine Chapters quickly acquired a distinguished reputation, and was the standard mathematics textbook in China and the surrounding regions until Western science was introduced in about 1600. This English translation gives the reader an idea of the distinctive style and important contributions of traditional Chinese mathematics. This text contains detailed worked solutions to all the end-of-chapter exercises in the textbook Organic Chemistry. Notes in tinted boxes in the page margins highlight important principles and comments.
